SharePoint Online

Description

Microsoft's hosted SharePoint is typically bundled in Microsoft 365 subscriptions, but can be licensed separately. SharePoint Online has the advantage of not needing to maintain one's own servers, but as a result lacks the customization options of a self-hosted installation of SharePoint.

It is limited to a core set of collaboration, file hosting, and document and content management scenarios, and is updated on a frequent basis, but is typically comparable with SharePoint Enterprise. Currently, additional capabilities include:

- Support for SharePoint Framework extensions
- New “Modern” (Responsive) SharePoint UX
- Yammer Integration and Office 365 Groups
- Integration with Outlook Web App
- Newer versions of Online Office Document Editor Tools
- Removal of various file size/number limitations
- Apps Concept
