

Email at CERGE-EI in general

Email Services Limitations

Amount of emails sent per hour for each user is limited to certain level

Current level is about 100 email sent per hour, which should be enough for regular email use.

It is a general security limitation and cannot be changed for individuals unfortunately.

There are serious objective reasons to limit this mostly because of security reasons and to keep general reputation score of our CERGE-EI site positive (so your regular emails will be well accepted by the other parties in the world)

Anyway, regular email system is not intended for mass mail services because it counts against the SPAM score and REPUTATION of the sit as a whole.

SPAM filters all around the world are becoming more strict every day. It is easy now to be on GRAYLIST or BLACKLIST and hard to get back from it...

Possible workaround

You must divide your recipients amount into smaller packs and sent them in more batches sent each hour...

Maximal size of Email Message

Emails from/to CERGE-EI

Maximal size of email message including attachments is 10 MB

Emails sent internaly

Maximal size of email message including attachments is 20 MB

Attachment filtering

Some attachments are **not allowed**, especially:

- **Executable files** (binary executables, executable scripts, documents containing macro, etc.).
- **Encrypted archives (password protected)** (like ZIP files).

Emails containing disallowed content are rejected.

Password protected files are stripped from the message.

Original message is eventually placed to the quarantine where you may release it.
