

How to add kyocera printer on MAC

First thing to do is to contact IT department. We have to know your **login username** of your MAC in order to add your account into kyocera server.

The screenshot shows the 'Add Printer' window in macOS. The window has a title bar with standard macOS window controls (red, yellow, green buttons). Below the title bar are three icons: a printer, a globe, and a printer. The main content area is divided into two sections. The top section contains the following fields: 'Address:' with the value 'myq.cerge-ei.cz' and a subtext 'Valid and complete host name or address.'; 'Protocol:' with a dropdown menu showing 'Line Printer Daemon - LPD'; and 'Queue:' with a dropdown menu showing 'FM' and a subtext 'Leave blank for default queue.' The bottom section contains the following fields: 'Name:' with the value 'myq.cerge-ei.cz'; 'Location:' with an empty text field; and 'Use:' with a dropdown menu showing 'Generic PCL Printer' and a subtext 'The selected printer software isn't from the manufacturer and may not let you use all the features of your printer.' At the bottom left is a question mark icon, and at the bottom right is an 'Add' button.
