

How to add Kyocera printer on Mac

First thing to do is to **contact IT Helpdesk**. We have to know your **login username** of your Mac in order to add your account into kyocera server.

After that, you go into your settings → Printers → Add printer

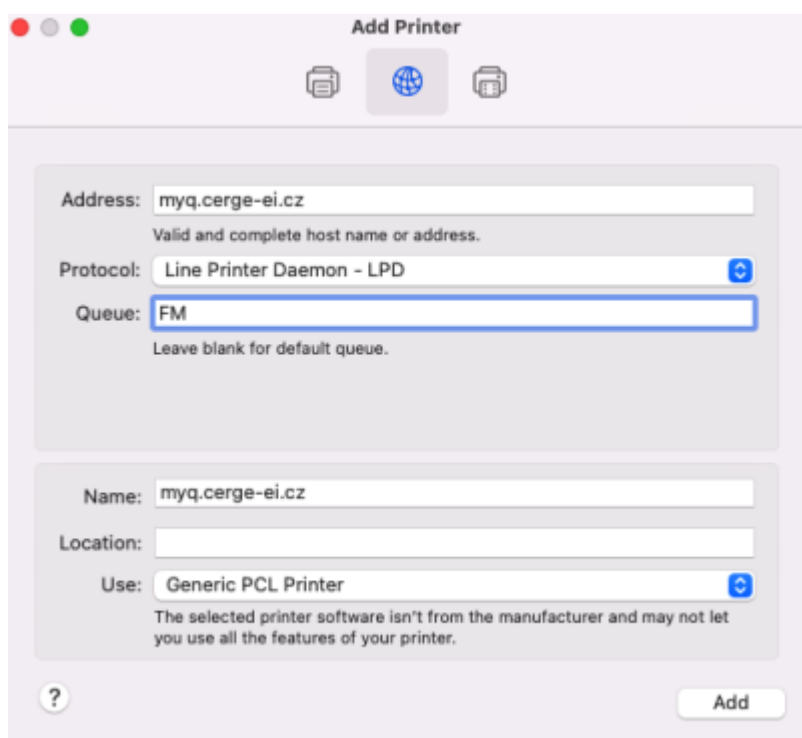

Address - myq.cerge-ei.cz

Protocol - Line Printer Daemon "LPD"

Queue - FM

Location - ***empty***

Use - Generic PCL printer

The screenshot shows the 'Add Printer' dialog box in macOS. It has a title bar with standard window controls and three icons: a printer, a globe, and a printer. The main area contains two sections. The top section has fields for 'Address' (filled with 'myq.cerge-ei.cz'), 'Protocol' (a dropdown menu showing 'Line Printer Daemon - LPD'), and 'Queue' (a text field filled with 'FM'). Below these are instructions: 'Valid and complete host name or address.' and 'Leave blank for default queue.' The bottom section has fields for 'Name' (filled with 'myq.cerge-ei.cz'), 'Location' (empty), and 'Use' (a dropdown menu showing 'Generic PCL Printer'). Below these are instructions: 'The selected printer software isn't from the manufacturer and may not let you use all the features of your printer.' At the bottom left is a help icon (question mark), and at the bottom right is an 'Add' button.
