

# How to add Kyocera printer on Mac

First thing to do is **contact IT Helpdesk**. We have to know your **login username** of your Mac in order to add your account into kyocera server.

After that, go to system preferences → Printers → Add printer

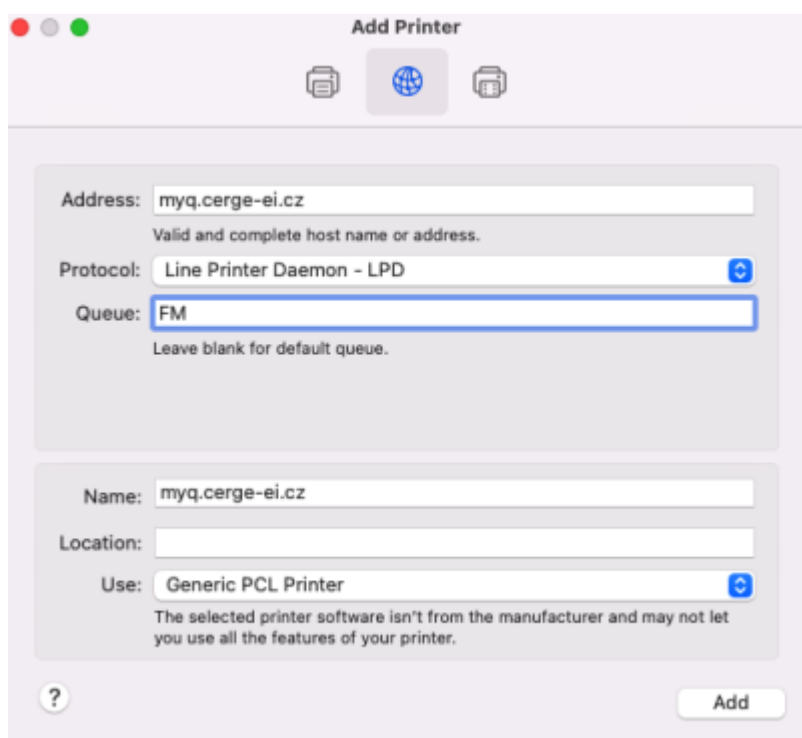

Address - myq.cerge-ei.cz

Protocol - Line Printer Daemon "LPD"

Queue - FM

Location - **\*empty\***

Use - Generic PCL printer

The screenshot shows the 'Add Printer' dialog box in macOS. It has three tabs at the top: 'Local', 'Network', and 'Web'. The 'Network' tab is selected. The 'Address' field contains 'myq.cerge-ei.cz' with a note 'Valid and complete host name or address.' below it. The 'Protocol' dropdown is set to 'Line Printer Daemon - LPD'. The 'Queue' field contains 'FM' with a note 'Leave blank for default queue.' below it. The 'Name' field also contains 'myq.cerge-ei.cz'. The 'Location' field is empty. The 'Use' dropdown is set to 'Generic PCL Printer' with a note 'The selected printer software isn't from the manufacturer and may not let you use all the features of your printer.' below it. At the bottom left is a help icon (?) and at the bottom right is an 'Add' button.
