addon: Manually sort folders

Q: *I created a number of mail accounts, but unfortunately the more important ones were created last. I'd like to move that account to the top of the list, but I don't see any way of reordering the account display once the accounts have been created.*

Is there a way to reorder the accounts once they have been created?

A: Install add-on extension **Manually sort folders**

This extension allows you to manually sort (order) your folders in the folder pane of Thunderbird or automatically sort them, but in a better way. This extension also allows you to re-order accounts in the folder pane.

see <https://addons.mozilla.org/en-US/thunderbird/addon/manually-sort-folders/?src=ss>

This extension adds a “Manually Sort Folders” entry in the “Tools” menu of Thunderbird.

By default Thunderbird sorts the folders of an account alphabetically. This extension allows you to choose a specific sort order for your folders, allowing you to put the most important ones on top, and manually order them.

This extension also offers another method for automatically sorting folders. Unlike Thunderbird's default, the extension's sort method takes into account Unicode special characters. If you do not wish to sort everything manually, you can use Unicode symbols at the beginning of your folder names to put them on top. For instance, you can put a Unicode star ★ at the beginning of your folder name to put it on top of the list without having to sort everything manually.

This also works for newsgroups inside a news accounts, and also works for sub-folders, and sub-subfolders, etc.

As a bonus feature, **you can also re-order accounts as well**, there's an extra tab for that now. The latest version now also allows you to **choose the default startup folder**.
